APEDEGEN

FEATURING APEWATCH

DON'T APE ALONE.

COMMUNITY. INTELLIGENCE. TRADING.

SAME APES. BIGGER PLANS.

MARKET INTELLIGENCE | WHALE INTELLIGENCE | COMMUNITY RESEARCH | DIRECT TRADING PLANNED

02 | INTRODUCTION & VISION

SAME APES. BIGGER PLANS.

APEDEGEN brings meme culture and a shared passion for crypto into one community. Our vision is a place where people exchange ideas, investigate tokens and build knowledge together.

APEWATCH is the ecosystem's research and intelligence service. Its roadmap connects market analytics, whale and smart money insights, collaborative research and direct trading in one experience.

From the first discovery to an informed decision, the goal is simple: more context, clearer evidence and a community to learn with.

COMMUNITY FIRST
Share ideas. Compare research. Learn together.

INTELLIGENCE WITH CONTEXT
Explore markets, wallet activity and token risks.

RESEARCH THAT COUNTS
Our vision: recognition for useful, verified contributions.

TRADING ON THE ROADMAP
Direct trading is planned within APEWATCH.

DON'T APE ALONE.

Discover together. Investigate together. Make your own decisions.

03 | THE ECOSYSTEM

ONE ECOSYSTEM. CONNECTED EXPERIENCES.

APEDEGEN is the community and brand at the heart of the ecosystem. **APEWATCH** is the service that turns shared curiosity into research and market intelligence, with direct trading on the roadmap.

APEDEGEN

COMMUNITY & ECOSYSTEM

Culture. Connections. Shared knowledge.

APEWATCH

RESEARCH & INTELLIGENCE SERVICE

Explore tokens. Compare evidence. Track market activity.

COMMUNITY RESEARCH

Investigate tokens together.

MARKET & WHALE INTELLIGENCE

Add context to market and wallet activity.

DIRECT TRADING

PLANNED

Move from research to execution.

PROGRESSION & REWARDS

PROPOSED

XP, reputation and eligible BANZ.

BANZ are internal **APEWATCH** reward credits with no promised monetary value.

04 | THE SERVICE

MEET APEWATCH.

The research layer of the APEDEGEN ecosystem.

APEWATCH brings token discovery, market context and community research into one shared terminal. It gives apes a place to compare evidence, publish a view and learn from each other before making their own decisions.

DISCOVER & COMPARE

Explore posted Solana tokens, search supported token addresses and review available market data. Charts and figures depend on connected providers and the data they return.

RESEARCH TOGETHER

Vote APE or NOT, publish calls, add comments and follow the discussion. A connected wallet identifies a participant; an opinion is not a trade instruction.

BUILD A TRACK RECORD

Profiles bring participation, XP and BANZ ledger activity together. The wider vision adds deeper analytics and more ways to recognize useful research over time.

RESEARCH FIRST

Today, APEWATCH does not execute trades or custody assets. Future features are presented as planned, and market data may be incomplete or unavailable.

05 | MARKET INTELLIGENCE

READ THE MARKET. BUILD THE CONTEXT.

A token is more than a ticker. APEWATCH helps researchers bring price action, pool conditions and community evidence into the same conversation.

MARKET SNAPSHOT

Review available price, market capitalization, liquidity and volume figures. Coverage and freshness depend on the connected data sources.

CHART CONTEXT

Open price history when candles exist. Compare different time windows to understand movement without confusing a chart pattern with a forecast.

TOKEN RESEARCH

Check the contract, chain, pool and available project information. Missing or unconfirmed details should remain visible as gaps in the evidence.

COMMUNITY PERSPECTIVE

Compare public APE and NOT opinions alongside comments and calls. Popularity adds context; it does not establish value or safety.

NEXT: DEEPER ANALYTICS

More advanced analytics and richer comparisons are planned. Final coverage, methods and availability will be announced as those features are developed.

⚠ Provider data can be delayed or incomplete. Always verify the token and source before acting.

FOLLOW THE FLOW. QUESTION THE SIGNAL.

Large wallet movements can reveal activity worth investigating. They do not tell the full story behind an address, a strategy or a trade.

AVAILABLE CONTEXT

APEWATCH describes whale activity rows where stored events exist. Their usefulness depends on the underlying coverage and available transaction evidence.

RESEARCH THE MOVEMENT

Compare timing, size and direction with liquidity, holders and broader token activity. A transfer may reflect an internal move, an exchange or another purpose.

PLANNED WALLET TRACKING

Deeper wallet following and advanced smart-money analytics are roadmap features. Supported sources, methods and coverage will be defined as they are developed.

EVIDENCE OVER LABELS

A large wallet is not automatically a skilled trader. An address label is not proof of identity, and historical success does not establish future performance.

The goal is better questions and better context.

Researchers remain responsible for checking the source, understanding its limits and reaching their own view.

FROM RESEARCH TO ACTION.

PLANNED

Direct trading is part of the APEWATCH roadmap. The ambition is to connect the research journey with a future trading experience, while keeping every decision in the user's hands.

THE PRODUCT VISION

Reduce the distance between understanding a token and deciding what to do next. Research context should remain visible when users evaluate a potential action.

DETAILS TO BE ANNOUNCED

Trading features, supported routes and fees have not been finalized. Availability and launch requirements will be communicated before any feature becomes available.

STATUS TODAY

APEWATCH currently provides research and community tools. It does not execute trades or custody assets. An APE vote or published call is an opinion, not an order.

The roadmap expresses a direction, not a launch commitment. Future functionality may change as the product develops. No feature can remove market risk or guarantee a result.

YOUR RESEARCH. YOUR DECISION.

BETTER RESEARCH. BUILT TOGETHER.

PROPOSED RESEARCH FRAMEWORK

Ape Together turns community observations into structured evidence. The aim is to help researchers build a clearer picture of a token and show what still needs checking.

LIQUIDITY

Review available pool depth and liquidity evidence.

HOLDERS

Examine distribution, concentration and changes over time.

DEVELOPER WALLETS

Document relevant wallet links and clearly state uncertainty.

WHALE ACTIVITY

Add transaction context instead of treating size as proof.

COMMUNITY EVIDENCE

Connect claims to identifiable sources and useful discussion.

REVIEW BEFORE RECOGNITION

Trusted checks and moderators would review submissions for evidence, relevance and completeness. Research should show its sources and remain open to correction when new information appears.

REWARD USEFUL CONTRIBUTIONS

Verified contributions are proposed as a basis for rewards. Eligibility and review rules must be published before this framework is activated; approval does not promise a payout.

VERIFIED RESEARCH IS NOT A SAFETY GUARANTEE.

09 / APE OR NOT

MAKE THE CALL. ONE HOUR. ONE RESULT.

The proposed one-hour challenge turns an opinion into a timestamped prediction. APE anticipates a qualifying rise; NOT anticipates a qualifying fall. Neither is an instruction to trade.

APE — PRICE INCREASE

NOT — PRICE DECREASE

01 LOCK THE START

The service records a verified reference price and locks the direction and entry time. Users cannot backdate or edit a submitted prediction.

02 VERIFY THE HOUR

Evaluation is scheduled exactly 60 minutes later. A background worker checks a reliable observation for that time using a consistent reference market.

03 CLASSIFY THE OUTCOME

A move below 3% in either direction is neutral. Correct, incorrect, neutral and invalid outcomes remain distinct. Missing or unreliable data receives bounded retries, then becomes invalid if unresolved.

04 SETTLE ELIGIBLE REWARDS

Only verified, correct and eligible calls can earn configured rewards. Invalid calls receive no rewards and no reputation penalty.

RESEARCH STAYS OPEN

One reward-eligible prediction per token, per user, every 24 hours. Separate sentiment votes remain opinions, not reward-bearing predictions. Market-data and liquidity checks determine eligibility.

10 / BANZ REWARD ECONOMY

RESEARCH EARNS RECOGNITION.

BANZ are internal APEWATCH reward credits. The proposed system recognizes eligible, verified activity through a transparent history of pending and available credits. No monetary value is promised.

PROPOSED ONE-HOUR REWARD TIERS

CORRECT DIRECTIONAL MOVE	BANZ	XP
3% to below 10%	+2	+20
10% to below 25%	+5	+35
25% to below 50%	+8	+50
50% or more	+10	+75

The same tiers apply to correct APE rises and NOT falls. Incorrect, neutral and invalid outcomes earn zero BANZ.

LIMITS KEEP IT BALANCED

Up to five reward-eligible settlements and 20 BANZ from predictions per user, per UTC day. Only one prediction per token, per user, every 24 hours can qualify. A platform-wide issuance budget and pause control limit the program.

A HISTORY YOU CAN FOLLOW

The wallet design separates pending credits, available credits and lifetime earnings. Each reward links to its source and status. Corrections preserve the original record and add an auditable reversal instead of rewriting history.

PROPOSED, CONFIGURABLE, CONTROLLED

Production issuance remains off until the reward rules and budget are approved. BANZ are not a tradable token. No staking, deposits, withdrawals or cash redemption are included.

11 / XP, LEVELS & RANKS

START CURIOUS. GROW DEGEN.

XP measures contribution and experience. The proposed progression system gives useful research a visible journey through 30 levels and 10 ranks. Reputation remains a separate measure of verified quality.

TOTAL XP REQUIRED	$50 \times (\text{level} - 1)^2$
	Level 1 starts at 0 XP. Level 30 requires 42,050 XP.

01 – 03	BABY DEGEN
04 – 06	JUNGLE SCOUT
07 – 09	CHART GOBLIN
10 – 12	DIAMOND DEGEN
13 – 15	ALPHA SNIFFER
16 – 18	APE WARLORD
19 – 21	ALPHA PREDATOR
22 – 24	JUNGLE KING
25 – 27	APE LEGEND
28 – 30	DEGEN GOD

EARN THROUGH VERIFIED ACTIVITY

Proposed XP includes +50 for completing a profile once, +10 for an eligible public call up to three times daily, and +30 for an approved research contribution up to twice daily. Correct one-hour predictions can earn +20 to +75 XP by outcome tier.

PROGRESS WITHOUT SHORTCUTS

Only reliably verifiable actions qualify. Repeated refreshes, passive wallet connections and duplicate events do not create unlimited XP. Additional XP can accumulate after Level 30; the displayed level stays capped at 30.

PROPOSED MILESTONE REWARDS

One-time BANZ milestones occur every three levels, from 5 BANZ at Level 3 to 500 BANZ at Level 30. All ten milestones total 1,155 BANZ, subject to program activation and eligibility.

12 / REPUTATION

TRUST TAKES MORE THAN XP.

The proposed Reputation score measures verified quality and consistency on a 0–1,000 scale. XP records experience; Reputation asks how useful and reliable that experience has been. BANZ records eligible rewards.

PROPOSED COMPONENT WEIGHTS

40%	VERIFIED CALL PERFORMANCE
25%	CONSISTENCY & SAMPLE SIZE
20%	RESEARCH QUALITY
15%	INTEGRITY

A proposed framework, not a published final scoring formula.

EVIDENCE BEFORE STATUS

Verified prediction outcomes and approved research findings form the evidence base. Accuracy matters alongside the number of evaluated calls, outcome distribution and the quality of supporting sources. Winning predictions alone do not define Reputation.

NEW DOES NOT MEAN UNTRUSTED

New users remain provisional until enough evidence exists. The minimum sample, calculation details and safeguards require definition before activation. A short winning streak should not outweigh a consistent, well-supported research history.

INTEGRITY STAYS VISIBLE

Changes should remain auditable, with review of manipulation and suspicious activity. Invalid price observations must not reduce a user's Reputation. Popularity and raw XP cannot substitute for verified evidence.

SHOW UP. DIG DEEPER.

SMALL HABITS. SHARED KNOWLEDGE.

Proposed Jungle Missions turn meaningful research into a repeatable habit. Progress follows verified actions, with clear targets, reset times and claim status. Opening pages or logging in alone does not complete the work.

APEWATCH
COMMUNITY INTELLIGENCE TRADES. A BRIGHTER JUNGLE.

A DAY IN THE JUNGLE

01	Research three different eligible tokens.
02	Publish one eligible APE/NOT prediction.
03	Submit one approved research contribution.
04	Record one verified correct one-hour prediction.
05	Review new evidence on a watched token.

RESEARCH DISCOVER VERIFY TOGETHER.

SAME APES. BIGGER PLANS.

PROPOSED DAILY BONUS

Complete three qualifying daily missions: **+3 BANZ**, subject to eligibility and program limits.

CONSISTENCY BUILDS A STORY

7 DAYS	14 DAYS	30 DAYS
/ +50 XP	/ SPECIAL BADGE	/ EXCLUSIVE ACHIEVEMENT

RESEARCH BUILDS BETTER APES.

TOKENS
ON-CHAIN DATA
MARKET INTELLIGENCE
COMMUNITY
A BRIGHTER JUNGLE

APEDEGEN

SAME APES. BIGGER PLANS.

EVIDENCE
ANALYSIS
INSIGHTS
IMPACT

MAKE RESEARCH A HABIT

Streaks require meaningful authenticated activity. Daily periods follow UTC, and rewards can only be claimed once. Weekly quest examples include five eligible predictions, three approved findings or five qualifying research days.

COLLECT PROOF OF CONTRIBUTION

Proposed achievements include First Call, Risk Detective, Smart Money Hunter, Whale Watcher and Consistent Researcher. Each needs defined criteria, visible progress and a verified unlock event. Badges celebrate contribution without promising financial returns.

14 / PROFILE & LEADERBOARDS

YOUR JOURNEY. YOUR EVIDENCE.

The proposed profile brings progress, research history and eligible rewards into one place. A member should be able to see what happened, why it counted and which evidence supports the result.

MY DEGEN STATUS

- LEVEL & RANK
- TOTAL XP & NEXT MILESTONE
- REPUTATION & PROVISIONAL STATUS
- PENDING & AVAILABLE BANZ
- MISSIONS & ACHIEVEMENTS
- PREDICTION & RESEARCH HISTORY

THREE WAYS TO CONTRIBUTE

TOP APERS
Verified performance and Reputation, supported by evaluated outcomes and research evidence.

TOP DEGENS
XP earned through eligible contributions and experience, separate from quality-based Reputation.

TOP RESEARCHERS
Verified research quality and contribution metrics, giving useful investigation its own recognition.

REAL RECORDS. CLEAR CONTEXT.

Prediction history should show direction, entry and evaluation times, price movement, outcome and earned rewards. Research history separates submitted, verified and rejected findings. Reward history links each credit to its source and status.

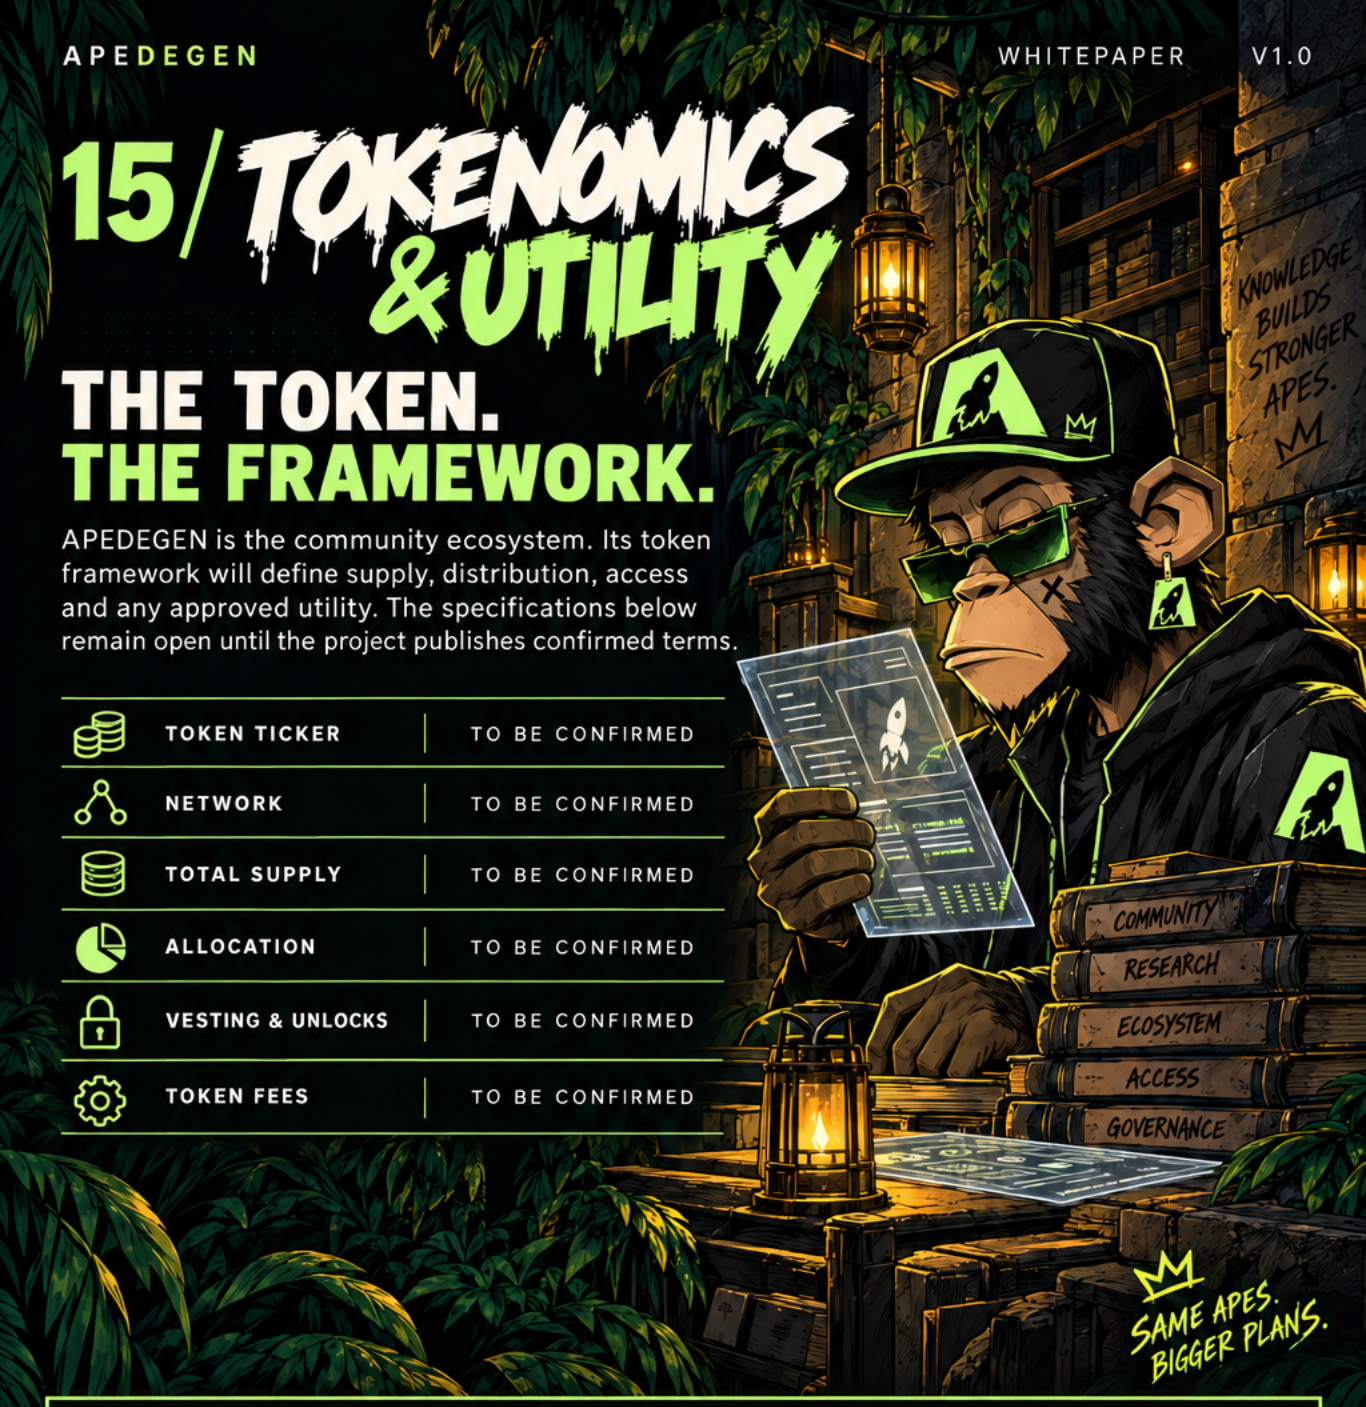

Daily, weekly and all-time views should appear only where genuine history supports them. Test, banned and fraudulent accounts must be excluded. Rankings are measures of activity and evidence, not guarantees of future trading results.

15/ TOKENOMICS & UTILITY

THE TOKEN. THE FRAMEWORK.

APEDEGEN is the community ecosystem. Its token framework will define supply, distribution, access and any approved utility. The specifications below remain open until the project publishes confirmed terms.

TOKEN TICKER	TO BE CONFIRMED
NETWORK	TO BE CONFIRMED
TOTAL SUPPLY	TO BE CONFIRMED
ALLOCATION	TO BE CONFIRMED
VESTING & UNLOCKS	TO BE CONFIRMED
TOKEN FEES	TO BE CONFIRMED

APEDEGEN TOKEN

Token utility and APEWATCH service access await project confirmation. No allocation percentages, revenue rights or fee benefits are represented as finalized in this edition.

BANZ CREDITS

BANZ is a separate internal rewards system described in the gamification design. It is not presented as the APEDEGEN token, a tradable asset or a promise of cash redemption.

TRANSPARENCY BEFORE LAUNCH

Publish the approved contract, supply, distribution and unlock schedule alongside clear access rules. Any future token benefits should be explicit, verifiable and distinguished from community rewards.

VERIFY THE CODE. DEFINE THE SCOPE.

Project-reported auditor:
BlockSafu

Report link, audited contract, network, date and scope await confirmation.

Audit coverage must be read against the exact code and version reviewed. A token-contract audit does not establish that the entire APEWATCH application or trading engine has been audited.

PROPOSED OPERATING SAFEGUARDS

AUTHORITATIVE SETTLEMENT

Prices, prediction outcomes and rewards are calculated through controlled server-side processes.

AUDITABLE REWARD LEDGER

Every credit records its reason and source. Duplicate settlement must never create duplicate rewards.

CONTROLLED ADMINISTRATION

Sensitive operations require defined permissions, traceable actions and limits on reward changes.

ABUSE RESISTANCE

Eligibility checks, daily caps and suspicious-activity review are intended to protect fair participation.

SECURITY IS AN ONGOING PROCESS

These controls describe the proposed operating design. Implementation, testing and independent review must support any future claim. Audits reduce uncertainty within a defined scope; they do not eliminate all vulnerabilities or investment risk.

17 / ROADMAP

BUILD THE TOOLS. GROW TOGETHER.

A milestone-led direction for connecting community, research and execution. Release scope and timing depend on readiness, validation and the resources required to support each capability.

01 / RESEARCH FOUNDATION

Develop the public research experience around token discovery, market context and community participation. Improve evidence quality and product clarity.

02 / COMMUNITY PROGRESSION

Proposed APE/NOT challenges, XP, ranks, BANZ credits, missions and reputation. Validate settlement rules, limits and abuse controls.

03 / EXPANDED INTELLIGENCE

Planned whale tracking, notable-wallet research, watchlists and stronger market intelligence. Explain data sources and analytical limitations.

04 / TRADING INTEGRATION

Planned token trading within APEWATCH. Confirm networks, routing, fees, wallet requirements and execution safeguards before release.

05 / CONTROLLED ROLLOUT

Test new capabilities, review security and gather feedback. Expand access as reliability and operational support are demonstrated.

PROGRESS MUST BE VISIBLE

Publish meaningful milestones and distinguish available features from planned work. This roadmap communicates direction, not guaranteed delivery dates.

SAME APES. BIGGER PLANS.

APEDEGEN brings people together through a shared identity and community culture. **APEWATCH** gives that community a place to investigate markets, exchange evidence and develop a more informed view.

DISCOVER → INVESTIGATE → TRADE → TRACK → CONTRIBUTE

FROM COMMUNITY TO CAPABILITY

The vision combines token research, market intelligence, whale and notable-wallet analysis, collaborative investigation and planned direct trading. Each layer should make the user journey clearer and more useful.

RECOGNITION WITH SUBSTANCE

XP, reputation and BANZ serve different purposes: participation, credibility and eligible internal rewards. Their value to the experience depends on transparent rules, verified outcomes and fair limits.

THE NEXT CHAPTER

Build useful tools. Explain the evidence. Publish progress. Keep the community involved as the platform develops. Trading remains a personal decision, and intelligence offers context rather than certainty or guaranteed returns.

DON'T APE ALONE.

Research together. Make your own decisions.

19 / RISK DISCLAIMER & SOURCES

INFORMED APES. INDEPENDENT DECISIONS.

INFORMATION, NOT PERSONAL ADVICE

This whitepaper describes a product vision and proposed features. It is educational information, not personalized investment, legal or tax advice. Nothing promises profit or guarantees a trading outcome.

INTELLIGENCE HAS LIMITS

Wallet-history analysis involves inference. Large transfers do not prove intent. Community claims, predictions and reputation scores are signals to examine, not certainty about future performance.

MARKET & EXECUTION RISK

Crypto assets can lose substantial or all value. Low liquidity, volatility, slippage, manipulation and failed transactions can affect outcomes. Users remain responsible for their trading decisions.

AUDIT & DEVELOPMENT SCOPE

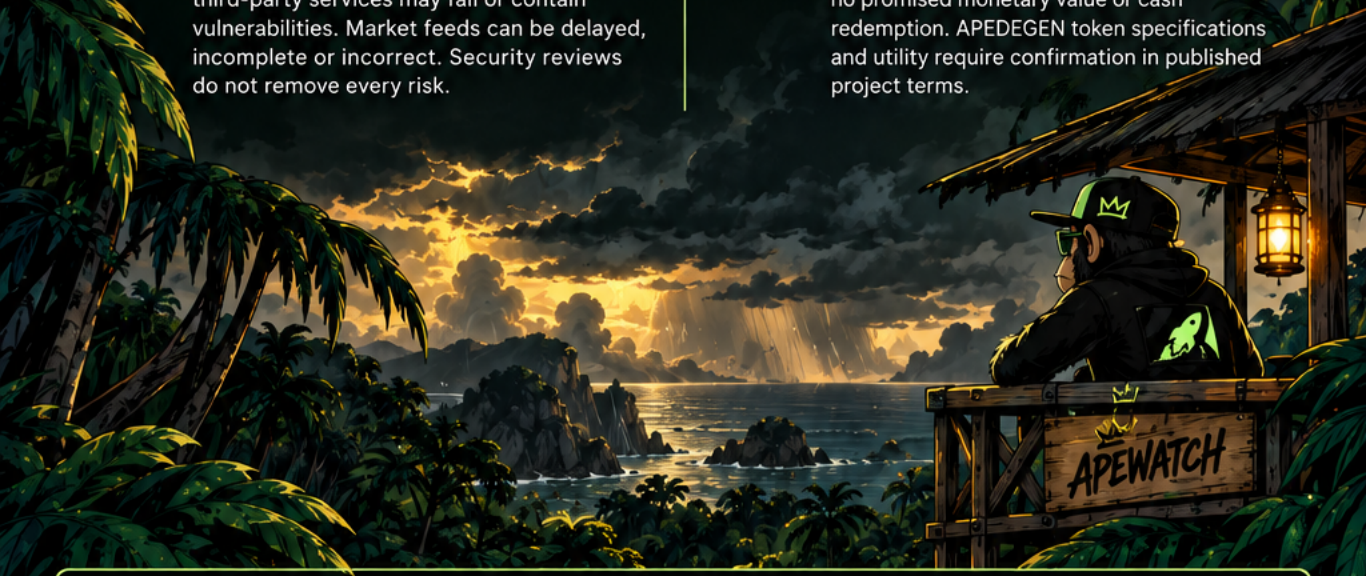

Any audit applies only to its documented scope and reviewed version. The BlockSafu report details await confirmation. Planned features, access rules and roadmap scope may change as the product develops.

TECHNOLOGY & DATA RISK

Smart contracts, wallets, networks and third-party services may fail or contain vulnerabilities. Market feeds can be delayed, incomplete or incorrect. Security reviews do not remove every risk.

REWARDS & TOKEN TERMS

BANZ is described as internal credit with no promised monetary value or cash redemption. APEDEGEN token specifications and utility require confirmation in published project terms.
